

# WHY YOUR ROOF *NEEDS REPAIR*

Repairs are necessary for any shingles that may be broken, eroded, peeling or even missing.

Check your gutters to make sure they are not clogged; unnecessary stress at roof edges can create leaks.

Rips, tears and holes in the flashing of your roof and chimney jeopardize the integrity.

Asphalt shingle granules provide additional protection; however, if you notice excess granules in your gutter it may be a sign of worn shingles and a vulnerable roof.
